

The stair made of glass is a much demanded item in houses and buildings. No wonder, for such a stair is special: the transparency creates a certain lightness, while the glass, sometimes combined with other materials, adorns the house or the building like a necklace adorns a woman, with a slight sensuality that in a very subtle way accentuate the curves and forms. At this time, when stairs made of glass have become a real trend, it is essential to find expert stairmakers who will do just that bit more to create a thing of beauty. EeStairs is such a perfect stairmaker, for this company will never ever abandon a challenge in making special stairs. Eestairs offers endless possibilities because of their experience of years. For EeStairs there are no difficult jobs, only interesting orders.

EeStairs in Barneveld produces eminent stairs and banisters. This extraordinary company offers with a certain regularity new products, like the 1m² stair. This is a staircase that can be placed in the small space of only one square metre. It is developed because one of the customers simply did not have more space to be used for the stair. For a long time now EeStairs has stairs made of glass in their collection, EeStairs was in fact a trendsetter in this area. For that reason EeStairs has definitely a huge advantage now stairs made of glass are more and more in demand. With the knowledge and the experience the company has, it still is a pioneer in this field. For designers and architects this is a comforting thought: their design will be accompanied and executed in a professional and trustworthy way.

EeStairs distinguishes itself from other staircasemakers by accepting impossible orders as a challenge. The words 'this is not possible' are not part of the vocabulary of EeStairs, on the contrary even, Eestairs with great enthusiasm starts every project that other staircasemakers turn away because of unsolvable problems. EeStairs loves most to work together from the beginning with the client, the builder, the contractor, the architect and whoever else is involved. As an extra quality, EeStairs has developed its own brand in glass of excellent quality: Longlast®. This brand is a synonym for safety, durability and protection against wear and tear. In everything, EeStairs follows its motto to go for 'the exponent of excellence'.

As every stair, a stair made of glass can have different functions or combine functions. It can be the main staircase, it can be the special one, it can be an exclusive eyecatcher or it can be just functional to go up or down. The design is made to the wishes of the customer, with many details or very basic. There is also a lot of choice in glass and the possibility to integrate lights or make combinations with other materials. Whatever the choice there are always more possibilities than one thinks and expects. Every stair is made to measure, that is exactly what EeStairs likes. The examples in these pictures enhance our point: the stairs made of glass by EeStairs are designs of beauty that will be a treasure in every surrounding.
